

VACON HIGH-POWER SERVICE CENTER FOR EUROPE

SECURED AVAILABILITY

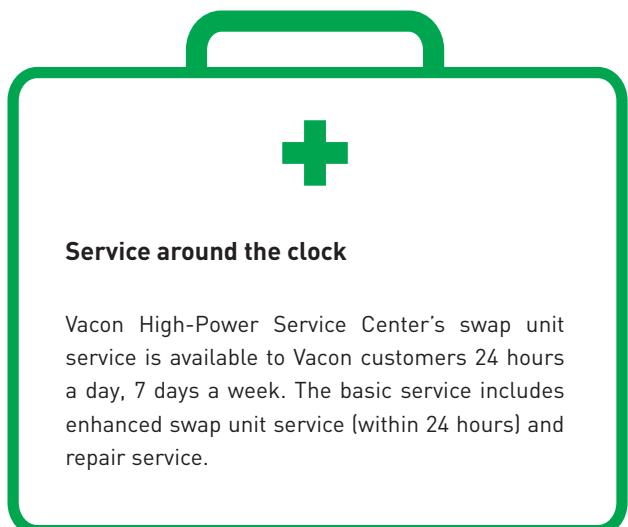

VACON
DRIVEN BY DRIVES

SAVE MONEY BY SECURED AVAILABILITY

The Vacon High-Power Service Center is a new regional service center for Europe. Its main purpose is to ensure fast service combined with readily available high-power units, to help the customer to get back in operation in the shortest possible time.

Five good reasons why Vacon and partners should take care of your AC drive

1. Secured availability, keeping capital machinery running.
2. Parts and units for the full product range available in the region within the shortest possible response time.
3. Vacon and its certified partner network support you with engineering and service resources.
4. Save money with optimized machine performance.
5. Feel comfortable when supported by the Vacon team, which is the most efficient and easy to work with.

Parts and units available for the full product range

The Vacon High-Power Service Center has stock available for the complete Vacon product range from 0.25 kW up to 5 MW, including complete power modules for air and liquid cooled drives.

All application engineering and service support by Vacon and partners

The Vacon High-Power Service Center offers reliable swap unit and repair services with an agreed response time. The Service Center also has facilities for testing application software, fieldbus communication and motor performance.

The Vacon High-Power Service Center offers the following services for high-power units:

- Enhanced repair service i.e. swap unit within 24 hours
- Standard repair service i.e. repair and return
- Emergency repair service i.e. swap unit within 4 hours (not as standard and must be separately agreed)
- On-site repair service (as back-up for Global AMS)
- Spare part deliveries for customers in urgent cases
- Training

UPDATE YOUR KNOWLEDGE ON AC DRIVES

Knowing how to operate and look after your AC drive will expand its lifecycle. Vacon offers standard or custom-made training services on site or at the Vacon High-Power Service Center.

Vacon offers a wide variety of training courses, for example:

- Introduction to Vacon AC drives
- Air cooled product training
- Liquid cooled product training
- Application programming for OEM customers
- Product selection and commissioning
- Service engineer training
- Drive systems engineer training

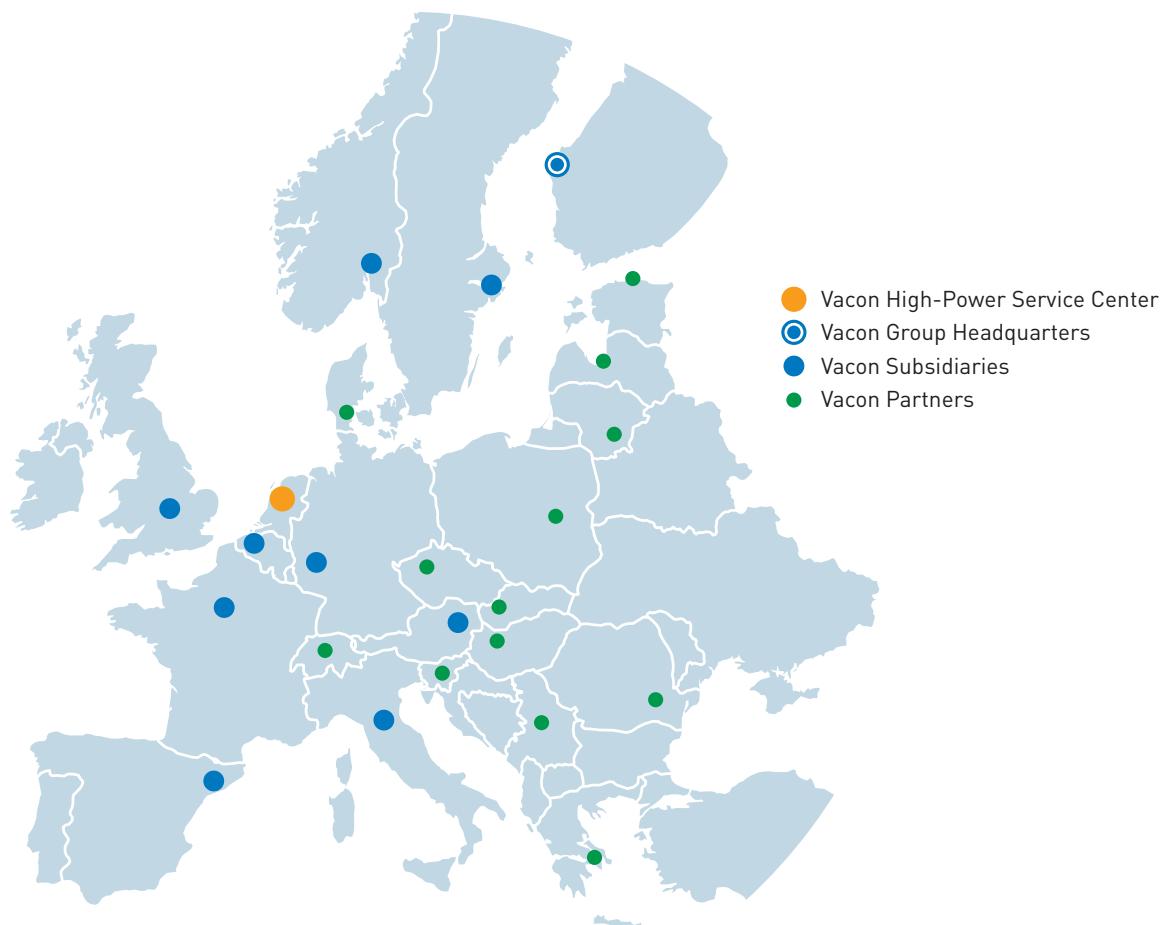

See our website www.vacon.com for a full listing of available courses.

Save money and feel comfortable

It is the clear objective of Vacon and its partners to be the most efficient and easy-to-work-with supplier. The Vacon High-Power Service Center enables you to make the most efficient use of the capital equipment and helps you to be the most profitable in your business.

VACON HIGH-POWER SERVICE NETWORK

The Vacon High-Power Service Center strengthens Vacon's service operations due to its central location and excellent logistic services as well as its proximity to one of Europe's major airports.
